

## EDITORIAL

Dear readers,

as you have been already informed on the website of our journal, the three international conferences **Energy – Ecology – Economy 2018**, **Control of Power Systems 2018** and **Renewable Energy Sources 2018** were organized in Slovakia under the common name of the event

### **POWER ENGINEERING 2018 (ENERGETIKA 2018)**

by

Slovak University of Technology in Bratislava

National Centre for Research and Application of Renewable Energy Sources

Slovak Committee of World Energy Council

The main objectives of the event were to establish and enhance cooperation, information exchange and experiences among power engineering experts from industry, universities and research institutes, from Slovakia and abroad. The event brings in the form of lectures, presentations and discussions further development in the area of operation and control of power systems, renewable energy sources, ecology and power engineering economy.

Our journal was one of the media partners of the conference and we enabled the participants to describe their contributions in more details and to publish their articles in Transactions on Electrical Engineering.

So this issue is exclusively focused on the selected articles rising on the base of the conference contributions. Our editorial team hopes that you find these articles extremely interesting. We hope also that the information published in the articles will help you in your own scientific and research activities and that we meet soon your contributions

either as articles in our **Transactions on Electrical Engineering** journal

or as presentations on the next **Power Engineering (Energetika)** conference.

In the name of the editorial team

Sincerely yours

Pavel Pivoňka – Head of Editorial Office / Chief Editor in Charge
